

At Stanford Medicine Children's Health, our fetal cardiologists at the Betty Irene Moore Children's Heart Center are committed to providing expert and compassionate care to families who receive a prenatal diagnosis of congenital heart disease. Our program can detect fetal heart problems as early as 14 weeks into gestation. Early detection helps us achieve the best outcomes for infants and can better prepare families to care for a child who has heart disease.

Our Fetal Cardiology Program partners with community obstetricians and perinatologists as well as with a team of multidisciplinary physicians from the Fetal and Pregnancy Health Program at Stanford. We focus on helping our families navigate the uncertainty and fear that can come with an unexpected prenatal diagnosis. Our fetal cardiology team provides supportive and individualized care every step of the way – from diagnosis to delivery and beyond.

**Heart defect detection**  
as early as  
**14 weeks' gestation**
